Abstract

The main aim of this paper is to simplify examination hall allotment and seating arrangement manual work. The purpose of developing this seating arrangement system is to provide a way to allocate exam hall for each student without any clash. Mostly, students are facing many problems for finding the exam hall. This paper gives the idea about the working of Examination Hall allocation management System. The software application allows the student to view the seating arrangement for the exam. The developed system is evaluated using real data by prospective users of the system.
